Short Description

Enzotech does not only produce great-looking coolers, their fittings also are true eye-candy!

Description

Enzotech does not only produce great-looking coolers, their fittings also are true eye-candy!

The chrome-plated fittings with double knurling are unique on the watercooling market. They are polished to a mirror finish, giving them a great look especially when lit by a LED.

These barbed fittings were truly designed to be High-Flow. The inner diameter was designed to be as large as possible, reducing the flow resistance to a minimum.

The short thread of only 5mm makes the use of spacer rings obsolete in most cases where one would usually be required.
