

WATERCOOL

Watercool HTSF2 3x120 LT Radiator

\$129.95

Product Images

Short Description

The HTSF2 is a heat exchanger in a compact design. Also with this product, we remain true to our tradition. A

very high performance and functionality, outstanding optics, as well as the usual Watercool quality characterize this radiator.

Description

The HTSF2 is a heat exchanger in a compact design. Also with this product, we remain true to our tradition. A very high performance and functionality, outstanding optics, as well as the usual Watercool quality characterize this radiator.

Triple parallel circuits ensure a very low flow resistance. The pipes were running around. Thus the HTSF2 is also suitable for high operating pressures. The design is optimized for low speed fans.

When HTSF2 is a 120mm radiator series. The radiator has a symmetrical design, the fan can be mounted on both sides. For the recording of most terminations are two G ¼ inch thread available. To mount the fan on both sides M3 threads are embedded in the case.

In the production of HTSF2 only high quality raw materials are used. The rows of tubes are made of pure electrolytic copper, the slats of high quality aluminum. For blade was intentionally left a coating. This improves the efficiency of the radiator. When corpus ensures a robust powder coated for maximum protection against external influences. The logo is applied using laser engraving.

The HTSF2 is a European product. A large part of the components is manufactured in Germany. Development and assembly take place in Germany.

For this product a versatile accessory is optional.

Specifications

Specifications:

- Polished copper tubes, aluminum fins
- Case Material: Powder coated Stainless Steel, polished
- External dimensions (L x W x H): 410x130x50 mm
- Weight: 1550g
- Surface: coated black
- Pressure tested: 5 bar
- Connection: 2x thread G 1/4 inch

Included:

- 1x HTSF2 3x120 LT
- 1x mounting hardware / instructions

Additional Information

| | |
|--------------------|-----------------|
| Brand | Watercool |
| SKU | WC-24013 |
| Weight | 3.5000 |
| Color | Silver |
| Radiator Size | 360 (3 x 120mm) |
| Radiator Thickness | 50mm |

Internet Reviews

The Watercool HTSF2 LT is a premium priced radiator being the most expensive by far in the test group. For that money you get precision German engineering and European manufacturing which oozes style and not some stamped out made in China clone. Unfortunately the core design, stylish as it is, does not translate to great thermal performance. It is a restrictive radiator also. Relative performance may improve in push or pull only fans, but with push&pull fans as tested, the HTSF2 fell short of the mark on performance.
