Short Description

We offer three different kinds of kits: Economy, Business and First Class. Similar to air travel every class has its very own appeal! The price/performance ratio is the key here: If the kit is more expensive additional performance can be expected! Generally every user should think about what is planned with their watercooling system.

Description

Alphacool's kit of the new generation, tailored to the needs of every customer!

We offer three different kinds of kits: Economy, Business and First Class. Similar to air travel every class has its very own appeal! The price/performance ratio is the key here: If the kit is more expensive additional performance can be expected! Generally every user should think about what is planned with their watercooling system.

Combinations:

Roughly said: If you expand your loop with additional radiators, the radiator surface can be added up and the new cooling capability can be taken from the table above.

As an example the Alphacool Business Class kit I with an additional 120mm NexXos Slim radiator is equivalent with the Alphacool First Class kit I.

Please note that jumping two classes may be critical regarding pump performance; hence you should roughly sketch out what is going to be cooled prior to installation of a kit. For upgrades some additional fittings and maybe some tubing is needed and you will be set for the challenge!

| Pump Type | DDC |
| Radiator Size | 120 (1 x 120mm) |
| Radiator Thickness | 45mm |
| Reservoir Type | Dual-Bay Res |
| Vendor SKU/EAN | 4250197110624 |
| Internet Reviews | <p>✖ Fusion Thermo: ready for air and water cooling With its sharp ROG style, the ROG Fusion Thermo is more than just a VRM cooler: it combines a 100% copper watercooling channel with electroplated nickel barbs and an integrated heatpipe, all wrapped in air-cooling fins. With the choice of both water-cooling or air-cooling, Fusion Thermo delivers the ultimate add-on to achieve that OC advantage. See more</p> |
