Short Description

The professional aquabox was compared with the previous model revised in several points and improved. New features include G1 / 4 thread, two additional threads on the top of the aquabox and a sunken into the windshield stainless steel trim with countersunk screws.

Description

The professional aquabox was compared with the previous model revised in several points and improved. New features include G1 / 4 thread, two additional threads on the top of the aquabox and a sunken into the windshield stainless steel trim with countersunk screws. The aquabox professional is machined from Delrin solid material and is extremely durable. Retained was the best coolant flow through the front window of aquabox whereby the windscreen is kept fogging and a very nice visual effect. The controversy in the windshield water volume can be regulated simply by two stainless steel grub screws in the inlet channel.

Features

- Three rear G1 / 4 thread, and feed them once or twice a return as Lighting option
- Two G1 / 4 thread on the top for easy filling of aquabox. The windscreen need to fill will not be removed. To this thread may e.g. also the aqua computer Fillport (Art. 34013) can be connected.
- Only white version: Mounting option for up to four 5 mm LEDs for effective lighting
- Coolant swept windscreen, thereby fogging. Adjustable water quantity by adjusting the inlet channel.
- Effective elimination of air bubbles on the front screen
- Corrosion resistant body made of Delrin
- Inflow channel with a large cross section for low flow resistance
- Front with completely level optics, precise fit recessed stainless steel trim and recessed screws
- Optional magnetic, tool-free mounting system for easy filling

Specifications

- Body: Delrin
- Front side plexiglass with stainless steel trim
