Description

PrimoChill Rigid Ghost Compression Fittings are finally here after months of R & D and testing PrimoChill's

goal was to provide the user the simplest possible method to install Rigid tubing into your system. The use of one oring and a meticulously designed nickel plated G 1/4 base fitting allows the user to install rigid tubing without the need of complex tools. With the addition of the Aluminum cap, a perfectly balanced amount of compression is applied to the rigid tube which prevents the cracking of fragile acrylic yet still provides enough pressure to eliminate the escape of fluid.

Note:

**Although aluminum is used for the outside ring, no aluminum comes in direct contact with the fluid.*

Features

- Lightweight, low profile.
- Nickel Coated Brass interior.
- Interior Compression Oring.
- Bright Aluminum Color.
- Patent Pending Design***
