

Alphacool D-RAM Cooler X2 (for Corsair Dominator RAM) - Plexi Version

\$32.99

Product Images

Short Description

The Alphacool D-RAM water block is one of the few water blocks which uses the stock heatspreaders on RAM modules for mounting. In typical Alphacool design, copper cooling plate and Acetal top, this RAM water block is designed to allow even beginners easy and quick mounting: Remove the old passive heatsinks, usually by removing three hexagonal socket screws and taking off the heatsinks.

Description

The Alphacool D-RAM water block is one of the few water blocks which uses the stock heatspreaders on RAM modules for

mounting.

In typical Alphacool design, copper cooling plate and Acetal top, this RAM water block is designed to allow even beginners easy and quick mounting: Remove the old passive heatsinks, usually by removing three hexagonal socket screws and taking off the heatsinks. Then remove the old thermal compound and apply a new thermal interface (not included). The now cavant threads in the heatsink can now be used to mount the new water block with the old screws - done!

Specifications

Mainboard compatibility:

This water block is designed to cover up to 2 neighbouring slots.

By design this water block allows ideal cooling performance even with low flow rates under 60l/h.

Technical specifications:

Material: Copper, Plexi

Colour: Black
