

# Custom Laser Work Products Charge

\$1.00

## Product Images

## Short Description

Performance-PCs.com laser cutting and etching service can set off your chassis with a bit more flair and style!

If you want some custom parts cut out or a window etched, or anything your mind can come up with please email us. PPCs' killer new plexiglass creations are made from high quality materials in the market and will give your case that little bit of something extra. The possibilities are endless!

## Description

---

Performance-PCs.com laser cutting and etching service can set off your chassis with a bit more flair and style! If you want some custom parts cut out or a window etched, or anything your mind can come up with please email us. PPCs' killer new plexiglass creations are made from high quality materials in the market and will give your case that little bit of something extra. The possibilities are endless!

Accepted file types for laser cutting, laser etching, and vinyl cutting:

We use CorelDRAW X6 in-house, but you may send vector-based files for work if you wish to avoid design fees for us handling the work for you. As long as you can export or save as one of the following vector-format file types we can possibly use them:

- CDR (CorelDRAW)
- AI (Adobe Illustrator)
- EPS (Adobe Illustrator)
- DXF (compatible with AutoCAD version 2011 or earlier -- make sure it's exported as 2D)
- DWG (compatible with AutoCAD version 2011 or earlier -- make sure it's exported as 2D)
- PDF (although it's a wrapper -- the embedded file needs to be vector-based)

Text should be converted from a font to outlines or curves (often called "breaking apart text to lines or polylines" in CAD or "converting text to curves" in other programs). Otherwise, if we do not have the font you are using our system will substitute your font with a different one and it will not yield accurate results for your final product.

Accepted file types for laser etching:

Note that all files need to be at least 300dpi @ the size you wish to have the etch. Raster-based files cannot be "blown up" as you cannot add pixels to an image already rasterized. An example of this is downloading a small 72dpi image off the internet and wanting that etched at 200% larger size -- it will not yield acceptable results. We will need to verify the file's integrity and compatibility before running the job. Your proof will be reasonably accurate to the final results.

Use the below file types for sending files for use:

- BMP (designed @ size and @ at least 300dpi)
- JPG (designed @ size and @ at least 300dpi)
- PSD (designed @ size and @ at least 300dpi)

\*\* For those that cannot supply digital files or those that are not artistically capable, we have in-house design services available. Contact for details. \*\*

NOTE: For laser services, we will need the following information emailed to us:

- What you want cut out or etched
- Size you're looking for.
- Material/color requested.

# Acrylic Colors

\*\*\*PLEASE\*\*\* Do not order this item unless you have already discussed with us the project or custom Mod you want done. Once we have discussed it and quoted you a price then you may order this item and include the details of the project in the text box below.

To discuss this and set up your custom project or service you may e-mail us at: [mod-proshop@performance-pcs.com](mailto:mod-proshop@performance-pcs.com)

## Additional Information

Brand	PPCS
SKU	LAS-ACRYL-CUST
Weight	0.1000
Case Accessory Type	Case Materials
