Short Description

The Mean Well 600W 24V Single Output Switching Auxiliary Power Supply is a high performance, 24 Volt power supply that is particularly well suited for running powerful thermoelectric Peltier devices. At 600 Watts, this PSU can power even the most power

hungry units. Having an auxiliary power supply removes the power strain from the computer's main power supply and makes sure there aren't any power fluctuations that could interrupt the cooler' performance and cause your overclocked chip to fry itself.

At 600 Watts, this PSU can power even the most power hungry units. Having an auxiliary power supply removes the power strain from the computer's main power supply and makes sure there aren't any power fluctuations that could interrupt the cooler' performance and cause your overclocked chip to fry itself.

Specifications

Specifications:

Output Voltage: 24 Volts DC

Min Current: 0 Amps

Max Current: 25 Amps

Power: 600 Watts

Input Voltage: 90~132VAC / 180~264VAC
selectable by switch

Additional Information

SKU	SE-600-24
Weight	4.0000
Color	Silver
PSU Wattage	600W
PSU Efficiency	Not Rated
Special Price	\$114.99
