Short Description

This is a full thermal ducting kit for your computer. The concept is to provide better airflow with one fan on one end and another fan on the other whether cold or hot air is being ducted. By using the thermal hood,

ducted air has nowhere else to go so the hot or cold air stays hot or cold till it reaches it's destination.

Description

This is a full thermal ducting kit for your computer. The concept is to provide better airflow with one fan on one end and another fan on the other whether cold or hot air is being ducted. By using the thermal hood, ducted air has nowhere else to go so the hot or cold air stays hot or cold till it reaches it's destination. This unit is great for mounting directly to your intake fan and then directly to your CPU fan creating a direct supply of fresh cool air. The reverse is also possibly based on heatsink design to exhaust hot air directly out of your chassis which eliminates the build up of heat which is common in most cases.

- Total Length: 16" Fully Extended
- Shortest Length: 2"
- Compatibility: 70/80/92mm Fans

*Note: 120mm fans can be used as well with the adapters available in the options.
