

Aquacomputer Decoupling for the Pump Mounting, Extra-Soft Yellow Rubber Buffers

\$7.95

Product Images

Description

This decoupling kit consisting of four extra soft rubber buffers can be installed between the pump and the PC case to reduce the risks posed by the pump vibrations effectively. The buffers are equipped with an extremely soft rubber element which is in contrast to conventional harder industrial buffers optimally adapted to the pumps used in PC water cooling systems. To help distinguish from "normal", harder buffers the Aqua Computer rubber elements are made with yellow-colored rubber. Harder industry buffer can absorb and, therefore, significantly more vibrations transmitted by the pump to the casing, the vibrations only significantly worse.

Scope of delivery:

- Four special buffer with yellow rubber element and M4 male threads
- Eight M4 washers
- Eight nuts M4

Additional Information

Brand	Aquacomputer
SKU	AQ-41092
Weight	0.5000
Color	Yellow
Material	Rubber
Vendor SKU/EAN	4260073416047
