Short Description

With the new NexXoS GPX coolers Alphacool is again a step ahead! Optimum performance and quality in a new cooling design for a great price!

A new sophisticated injection system means the GPU is actively cooled. All other chips are sufficiently cooled by the passive cooler which is also in contact with the watercooling block for extra efficiency.

Description

With the new NexXoS GPX coolers Alphacool is again a step ahead! Optimum performance and quality in a new cooling design for a great price!

A new sophisticated injection system means the GPU is actively cooled. All other chips are sufficiently cooled by the passive cooler which is also in contact with the watercooling block for extra efficiency.

The patented technology "Philips structure" from the Alpha NexXoS XP in 2004, was further developed improving the base plate. The Fins and channel structure has been further refined. The fins are now 0.5 x 0.5 mm and 2.5 mm high. This enables a very large and rapid heat transfer from the copper to the coolant.

SLI mode: The inlet and outlet are positioned of easy use in SLI mode. Up to four graphics cards can also be connected with the Alphacool GPX SLI connector. (Available separately)

Back plate: The GPX range always Includes a back plate which uses small passive fins to cool rear of the graphics card.

Cooling fins: The passive front plate cooling uses 18mm deep cooling fins that cover the rest of the graphics card completely.

Compatible: Sapphire Radeon R9 280X Dual-X OC, 870MHz, 3GB GDDR5 (11221-00-20G)

Additional Information

Brand	Alphacool
SKU	AC-11143-D
Weight	3.0000
Color	Black
Vga	AMD R9 280X (Non Reference)
Block GPU Type	AMD
Block Style	Copper
Vendor SKU/EAN	4250197111430
Internet Reviews	 "The German tradition manufacturer Alphacool convinced often with innovative products. So it seems to be mainly the graphics card cooler, where Alphacool tried different concepts. While in the previous year injection cooler, so there are this year modular GPU-only cooler with a solid precipitated aluminum cooling surface. How well can beat the modular concept of cooling you can read on the following pages.... "
