

Aquacomputer Aquadrive Micro Copper G1/4

\$66.95

Product Images

Short Description

The aquadrive micro is a harddrive cooler which is mounted on the harddrive from underneath. Thereby it is possible to install the hard drive with the water block into common 3,5 mounting bays. The cooler is milled out of copper and closed via a stainless steel plate. The new copper version can be used to cool up to two hard drives (2x SATA or 1x SATA and 1x IDE/PATA).

Description

The aquadrive micro is a harddrive cooler which is mounted on the harddrive from underneath. Thereby it is possible to install the hard drive with the water block into common 3,5 mounting bays. The cooler is milled out of copper and closed via a stainless steel plate. The new copper version can be used to cool up to two hard drives (2x SATA or 1x SATA and 1x IDE/PATA).

Common hard drive screws are needed for the mounting (not included in delivery). Threads are G1/4, fittings are not included in delivery.
