

Aquacomputer Kryoconnect for Kryographics, Width 5 Slots for 2 or 3 Graphic Cards

\$19.95

Product Images

Short Description

The kryoconnect direct connection kit allows to directly connect two or three graphics card water blocks (kryographics series) and can be used for SLI or Crossfire systems.

The kit comes with a connection block made of Delrin which replaces the connection blocks of the individual water blocks. If this set is used to connect two water blocks, the graphics card may have a spacing of two or four slots (meaning one or three slots remain unused between the graphics cards). Alternatively, the set can be used to connect three water blocks with one empty slot between the graphics cards. If used with two water blocks, the unused connection can be sealed with a stainless steel plates which is included in delivery. Sealing screws are also supplied and can be used to determine whether the waterblocks are connected in

parallel or in series.

Description

The kryoconnect direct connection kit allows to directly connect two or three graphics card water blocks (kryographics series) and can be used for SLI or Crossfire systems.

The kit comes with a connection block made of Delrin which replaces the connection blocks of the individual water blocks. If this set is used to connect two water blocks, the graphics card may have a spacing of two or four slots (meaning one or three slots remain unused between the graphics cards). Alternatively, the set can be used to connect three water blocks with one empty slot between the graphics cards. If used with two water blocks, the unused connection can be sealed with a stainless steel plates which is included in delivery. Sealing screws are also supplied and can be used to determine whether the waterblocks are connected in parallel or in series.

Specifications

Suitable for the following waterblocks:

kryographics for GTX Titan (art. 12670, 12673, 12684, 12685)
