Short Description

After months of development with input from the modding and PC enthusiast community, this premium cable kit features our new ModMesh™ cable sleeving, and is a full replacement cable set compatible with Corsair® RMi & RMx power supplies. These cables are a joy to build with, featuring vivid color, superb pliability, and excellent durability.

Description

After months of development with input from the modding and PC enthusiast community, this premium cable kit features our new ModMesh™ cable sleeving, and is a full replacement cable set compatible with Corsair® RMi & RMx power supplies. These cables are a joy to build with, featuring vivid color, superb pliability, and excellent durability.

New to the Corsair RMi and RMx power supplies are small capacitors on the 24-pin ATX, 4+4 pin EPS, and PCIe cables that enhance voltage regulation and ripple suppression. CableMod smartly places these components on the cables so that they are hidden behind your motherboard tray, maintaining a clean and heatshrink-free look for your rig. What's more, CableMod uses high-quality, 100% solid-state capacitors for peak performance and reliability.

As full replacement cables, these don't add extra length to your existing cables which means less cable length to manage. Featuring a new array of luscious colors, CableMod cables are the perfect way to cap off the perfect PC build.

As a special bonus, a set of CableMod ModMesh Cable Combs is even included to get your build started off right
