## Product Images

## Description

---

The new Scythe Thermal Elixir 2 provides excellent heat transfer between the processor and heat sink without compromising the application. High-quality ingredients in combination with the Pure Aluminum Particle Hybrid technology reduce the thermal resistance significantly and allow a convenient and controlled application. It has an excellent long-term stability and has no electrical conductivity under normal use. The applied thermal grease is ready to be used right away and no "burn-in" time is required.

**\*Note: This Item can not be shipped using DHL\***

## Features

---

### Excellent Cooling Performance

With the focus on the PC sector Pure Aluminum Particle Hybrid Technology is used to optimize the heat transfer between CPU and heat sink. The Thermal Elixir 2 has a very high thermal conductivity and low thermal resistance. A special additive composition provides an excellent long-term stability and extremely low dry-out characteristics.

### Easy to Apply

The consistency allows easy and economic application. Even removing the applied thermal grease is easily. Furthermore, it has a very low dielectric constant / high dielectric strength and no corrosive properties. There is no risk of short circuit, even if the thermal compound covers electrically conductive components.

### No "burn-in" time

The Thermal Elixir 2 reaches its maximum potential immediately after applying. It does not require large time periods to provide maximum cooling performance.

## Specifications

---

Model Name:

Scythe Thermal Elixir 2 Wärmeleitpaste

Model Number:

SCTE-2000

Weight:

5 g / content

Thermal Resistance:

0,013 K-in<sup>2</sup> / W

Thermal Conductivity:

3.5 W/ (mK)

Temperature Range:  
-20° ~ 120°C

Dielectric Strength:  
1.5 KV / mm

Ingredients:  
Aluminum (~ 70%)  
Zinc Oxide (~ 20%)

### Additional Information

Brand	Scythe
SKU	SCTE-2000
Weight	0.3000
TIM Type	Paste
Special Price	\$3.00
