Short Description

Introducing brand new for 2017, KPC INFERNO socket heater kit. We've designed a fully automatic modular socket heating system for motherboards when using sub zero cooling, which can self adjust thermal loading based on the cpu's cooling temperature. This revolutionary plate can minimize dangerous moisture and condensation associated with extreme pc cooling.

Description

Introducing brand new for 2017, KPC INFERNO socket heater kit. We've designed a fully automatic modular

socket heating system for motherboards when using sub zero cooling, which can self adjust thermal loading based on the cpu's cooling temperature. This revolutionary plate can minimize dangerous moisture and condensation associated with extreme pc cooling. It also helps to keep the signaling strong between cpu socket and dimm slots when exposed to extreme temperatures. The KPC INFERNO works at a wide range of temps -40c to below -200c and beyond. This bolt on extreme upgrade is compatible with ALL KPC cpu containers past, present, and future. Kit comes included with everything as pictured. Step by step user install guide can be found at KPC forums product support section here: <http://forum.kingpincooling.com/showthread.php?t=3958>

Additional Information

Brand	KingPin Cooling
SKU	KPC-I-002
Weight	1.5000
Color	Black
Block Accessory Type	Hot Plate
Block CPU Type	Intel/AMD
