

Premium N80 NVME NGFF M.2 2280 SSD Cooling Aluminum Heatsink (Gold)

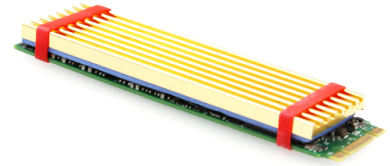

\$11.99

Product Images

Design of heat - dissipating aluminum strip
Let heat area doubled, can be greatly improved. Thermal performance

Good heat dissipation
Scientific structural design and professional development
A combination of heat-conducting silicon wafers can be used effectively Temperature 5-20 °C.

↓ 5-20 °C

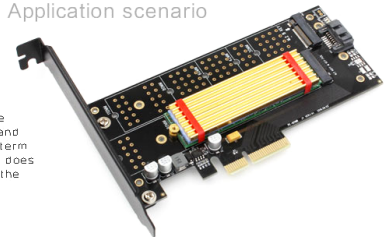

Application scenario

This product can only give a disk cooling, if you want to give two or more disk cooling can buy two groups Or groups.

Application scenario

'Bundled' heat dissipation
High-toughness silicone ring at the moment a strong fastening plate and thermal contact with silicon, long-term worry-free use. Note: The product does not contain the expansion card in the figure, will not elaborate.

Short Description

These Premium N80 NVME NGFF M.2 2280 SSD Cooling Aluminum Heatsink (Gold) are great for Keep your NVMe SSD cool .

Description

These Premium N80 NVME NGFF M.2 2280 SSD Cooling Aluminum Heatsink (Gold) are great for Keep your NVMe SSD cool .

Additional Information

Brand	ModDIY
SKU	M2-2280-G
Weight	0.1500
Color	Gold
Heatsink Type	SSD/HDD/M.2 NVME
Material	Aluminum
