Short Description

The third level in the Eissturm Gaming set family comes with a 280 x 30mm full copper radiator.

This not only provides enough potential for moderate overclocking on your CPU, but also enables you to integrate a GPU cooler, such as one of our GPX series coolers or even another manufacturer's, with your GPU.

Description

The third level in the Eissturm Gaming set family comes with a 280 x 30mm full copper radiator.

This not only provides enough potential for moderate overclocking on your CPU, but also enables you to integrate a GPU cooler, such as one of our GPX series coolers or even another manufacturer's, with your GPU.

In such a case, you can count on more than comfortable temperatures, even if overclocking is only cautiously recommended at that point.

The powerful DC-LT 2600 reliably and quietly does its work to support the fantastic Alphacool NexXos XP³ Light CPU cooler.

Features

- NexXos ST30 full copper 280mm radiator with high-efficiency cooling fin design
- Alphacool DC-LT 2600 Ultra low noise pump with 72 l/h potential flow rate with the compact Alphacool Eisstation
- NexXos XP³ Light Black CPU cooler for reliable heat transfer from your CPU

All necessary accessories and cables are included, as well as our popular Alphacool "Cape Kelvin Catcher / CKC" all-in-one coolant and a funnel and jumper plug for filling the pump using a power supply – no need to turn on the PC.
