

Innovation Cooling
FOR COOLER. FOR LONGER.

Innovation Cooling Graphite Thermal Pad – Alternative To Thermal Paste/Grease (30 X 30 mm)

\$9.99

Product Images

Short Description

IC Graphite Thermal Pad is a thermal interface alternative to thermal paste for CPU's, GPU's and Game stations. This product features top tier thermal performance that is uniquely stable across a wide temperature range -200C to +400C and when used long term should last the life of most electronic

components. IC Graphite is 100% pure graphite, non toxic this pad is a solid state modular solution no messy applications to clean, no guessing if you have used the proper amount, just place pad and mount sink.

Description

IC Graphite Thermal Pad is a thermal interface alternative to thermal paste for CPU's, GPU's and Game stations. This product features top tier thermal performance that is uniquely stable across a wide temperature range -200C to +400C and when used long term should last the life of most electronic components. IC Graphite is 100% pure graphite, non toxic this pad is a solid state modular solution no messy applications to clean, no guessing if you have used the proper amount, just place pad and mount sink. Caution: IC Graphite is electrically conductive! Any contact with electrical components when the computer is turned on can permanently damage the components. Please ensure that the system is turned off during the application process and that no stray pieces are contacting any components before powering on the system.

Features

- TOP TIER THERMAL PERFORMANCE – The IC graphite pad features a thermal conductivity of 35W/m-k.
- EXTRAORDINARY DURABILITY – This thermal pad features a dry solution that contains no liquids. It will not pump or bake out like regular thermal compounds.
- UNMATCHED TEMPERATURE RANGE – Keeps your CPU safe with a temperature operating range of -200C to 400C. RoHS compliant.
- TAKE THE GUESSWORK OUT – The modular solution means never again having to wonder if you've applied too much or too little thermal paste.
- REUSABLE – You'll never have to worry about buying thermal paste ever again. The graphite thermal pad can be reused on multiple builds with no loss in performance.
