

WATERCOOL

Watercool HEATKILLER® IV eBC - Backplate for TITAN V - Black

\$19.95

Product Images

Short Description

The HEATKILLER® IV eBC backplate is a useful addition for the HEATKILLER® IV VGA water blocks. Mounted on the backside of the graphic card, it improves the cooling performance while also granting mechanical stability. This is due to the construction out of massive black anodized aluminium. Even more, it also just looks good.

Description

The HEATKILLER® IV eBC backplate is a useful addition for the HEATKILLER® IV VGA water blocks. Mounted on the backside of the graphic card, it improves the cooling performance while also granting mechanical stability. This is due to the construction out of massive black anodized aluminium. Even more, it also just looks good.

The backplate cools relevant components on the PCB's backside, including GPU and voltage regulation (VRM). Precut thermal pads are included in the scope of delivery.

Recesses in the backplate offer compatibility to mainboards with extremely wide IO ports. The stepping near the RAM slots offers ample distance to the memory modules.

Isolating spacers on the backside of the backplate ensure easy installation.

The enclosed mounting material is optimized for usage with HEATKILLER® IV water blocks. The backplate can be used with water blocks of other manufacturers. Specialized mounting material might be needed though. This is not part of the delivery scope.

Specifications

Technical data:

Material: Anodized aluminum

Dimensions (L x W x H): 265 x 98 x 4,5mm

Weight: 250g

Compatible with:

Nvidia TITAN V

Scope of delivery:

1x HEATKILLER® IV eBC - Backplate for Nvidia TITAN V

1x Mounting material

Additional Information

Brand	Watercool
SKU	WC-16065-D
Weight	1.5000
Color	Black
Vga	NVIDIA Titan V
Block GPU Type	Nvidia
Block Accessory Type	VGA Backplate
Material	Aluminum
Special Price	\$24.95
