## Short Description

---

With the Alphacool Eismatrix RGB-LED Controller and the Eiszyklon fans you have the perfect tools to illuminate your PC extensively and impressively. Of course, the Eismatrix can control your fan speeds, but that's not all. With the RGB LED controller you can not only change the colour, but also create a whole series of dynamic effects and best of all, everything can be controlled via the simple and clear Eismatrix mobile phone app. All you need is a Bluetooth enabled Android (from version 4.3) or Apple smartphone (from iOS version 6.0) or an appropriate tablet for full control.

## Description

---

With the Alphacool Eismatrix RGB-LED Controller and the Eiszyklon fans you have the perfect tools to illuminate your PC extensively and impressively. Of course, the Eismatrix can control your fan speeds, but that's not all. With the RGB LED controller you can not only change the colour, but also create a whole series of dynamic effects and best of all, everything can be controlled via the simple and clear Eismatrix mobile phone app. All you need is a Bluetooth enabled Android (from version 4.3) or Apple smartphone (from iOS version 6.0) or an appropriate tablet for full control.

The Eismatrix Controller can handle a huge range of 29 different RGB effects. These include the following colour effects: Static, Breathing, Fading, Marquee, Covering Marquee, Alternating, Spectrum Wave and Pulse.

Music fans have the possibility to let their lighting pulsate in time with their tunes. The whole thing can of course be combined with colour changes. Continue the party inside and out of your computer!

If you would like to have a display of bright colours, you can create your own profile with your own colour palette. The selected colours are then played back in the desired order. You can determine how fast the colour changes should take place and if you wish, you can combine this with three effects to ensure everything stays fresh.

Using the timer in the Eismatrix app, different effects can even be played at certain times. For this purpose, 22 RGB LED lighting effects are available. The speed and brightness of the effects can also be controlled to your liking.

Up to 14 RGB LED fans can be connected to the Eismatrix controller. The fans are always controlled

simultaneously, controlling individual fans this way isn't possible. The RGB LED fans are also controlled via the app and are infinitely variable. When using the Eiszyklon RGB LED fans, the control can even be set to 0, which stops the fans completely. This does not change the luminosity of the RGB LED Eiszyklon fans. The LEDs and fan speed are controlled separately. The combination of Eismatrix RGB LED controller and Eiszyklon RGB LED fan is a perfect match.

Power is supplied via a SATA connector and the fans are controlled via a 3 or 4-pin connector. The Eismatrix Controller uses its own RGB connector to securely hold the cables in place. For the use of RGB LED fans or RGB LED strips with a classic 4-pin RGB connector you need an adapter. Two adapters are included.

Installation is very simple using magnets attached to the floor. This means that the Eismatrix RGB LED controller can be easily accommodated in almost any case.

## Specifications

---

### Technical Details

- Size: 118 x 73 x 33 mm
- Connection Method: bluetooth
- Fits to: iOS 6.0 and higher, Android 4.3 and higher
- Working Temperature: -20°C ~ 60°C
- Working voltage: DC 12V
- Output: <144W
- Channel Output: <72W
- Effective Remote Distance: 15-20m
- Net weight: 95g

### Scope of Delivery

- 1x Alphacool Eis-Matrix Aurora Controller - Black

## Additional Information

Brand	Alphacool
SKU	AC-15346-D
Weight	1.5000
Color	Black
Fan Accessory Type	PWM Fan Hub
Shape	Rectangle
Vendor SKU/EAN	4250197153461
Special Price	\$29.95
