

Scythe SQD2.5-1000 2.5" Internal HDD Silencer

\$34.95

Product Images

Short Description

Scythe Quiet Drive 2.5 sets the first task to get rid of the noise and vibration of the hard drive. This is a fully enclosed device developed by Japanese experts. It is designed to completely isolate the hard drive from the outside world with several steps of protection against noise and vibration.

The hard disk is covered by two structures that are interconnected by thermal pads. Any vibrations from the internal structure are suppressed by specially laid rubber.

Description

Scythe Quiet Drive 2.5 sets the first task to get rid of the noise and vibration of the hard drive. This is a fully enclosed device developed by Japanese experts. It is designed to completely isolate the hard drive from the outside world with several steps of protection against noise and vibration.

The hard disk is covered by two structures that are interconnected by thermal pads. Any vibrations from the internal structure are suppressed by specially laid rubber. Through the use of new heat shims with increased heat transfer, the Quiet Drive hard drive enclosure acquires the appropriate performance and efficiency.

According to the "Matryoshka" principle, Scythe Quiet Drive 2.5 can be put into a regular Scythe Quiet Drive (for 3.5" hard drives), thereby increasing the degree of impact of vibration absorption and sound insulation. Quiet Drive 2.5 assembled in this way can also be mounted in a free compartment of 5.25" size.

Specifications

Model Number: SQD2.5-1000

Size: 105 x 146 x 25mm

Hard Drive Type: 2.5" P-ATA / S-ATA

Compartment: Standard 3.5" Compartment

Internal structure: Four-fold internal structure with double sound absorption, heat dissipation and vibration

suppression

Cooling: Dual heat distribution method + heat pads

Fasteners: Cushioning plates

Additional Information

Brand	Scythe
SKU	SQD2.5-1000-D
Weight	2.5000
Color	Black
Device Type	SSD/HDD Enclosure
Bay Size	2.5" Bay
Special Price	\$20.95
