Description

The molex extractor is a must have for sleeving power supplies or for removing Molex connectors off other cables. This versatile tool lets you remove male and female 0.093" diameter locking crimp pin connectors without damaging them. Allows you to work faster and more efficiently when modding.

If you are tired of damaging yours pins with those "plunger-type" extractors then give this tool a shot. We have found this simple yet effective extractor to be the best on the market. Just insert the front shaft of the tool, drawing the letter "O" two times and then push on the ball with the palm of your hand. The pin will pop out undamaged in a matter of seconds. Trust the experts on this ;)
