Short Description

Do you ever have trouble getting your soft tubing to cooperate in a build? If you do, you need to get some of these Tubing Tamers! They are very easy to install, just slide them on your tubes before you install the tubing in your fittings and let them hold your tubes where they should be!

Description

Do you ever have trouble getting your soft tubing to cooperate in a build? If you do, you need to get some of these Tubing Tamers! They are very easy to install, just slide them on your tubes before you install the tubing in your fittings and let them hold your tubes where they should be!

Tubing Tamers can be made to fit any size of tubing with any spacing between the tubes. We offer all the common soft tube sizes and a few spacing options that will work for many configurations. However, you can also input a custom spacing if you know exactly how far apart your tubes are. They come in 5mm thick clear acrylic, which is very strong, but also unobtrusive at the same time.

Note: When getting custom spaced Tubing Tamers make sure to measure for center point of one tube to the center point of the other.
