These are a great add on to any computer case or vehicle! They will control virtually any accessory you can throw at them up to 20 AMPS !!!! Racers use them to start the car, the military to fire missiles, and you can control lights or fans in your computer case, winches, NOS systems, amps and more!

## Description

These are a great add on to any computer case or vehicle! They will control virtually any accessory you can throw at them up to 20 AMPS !!!!

Racers use them to start the car, the military to fire missiles, and you can control lights or fans in your computer case, winches, NOS systems, amps and more!

The Military rocker switches currently offered are of either the lighted illuminated or non-illuminated toggle switch variety. Each Toggle switch comes with a choice of a colored guard.

For the LED switches, these are a true 12V LED's in the switch casing, which means you do not need to add additional resistors typical with some other LED lighted products.

## Specifications
