\$66.50

Product Images

Short Description

These Radiators are made from a red copper material, have circular pipes to reduce water resistance. They can withstand 5kg of pressure while other radiators can only withstand about 1kg of pressure.

Description

These Radiators are made from a red copper material, have circular pipes to reduce water resistance. They can withstand 5kg of pressure while other radiators can only withstand about 1kg of pressure.

****Please Note:** These radiators are meant for performance only and not their aesthetics as some have chips in the paint and areas where copper or solder is visible.******

Features

- Very durable, life of more than 5 years
- 21 parallel to form a U-shaped copper capillary tube, the thickness of the radiator in the limited case of the liquid passage sufficiently increased.
- capillary channel having internal helical structure and the wall to make full contact with heat transfer medium.
- Pipeline embalmed internal use does not produce dirty dirt.
- After three stringent air tightness test, to prevent the occurrence of leaks.

Specifications

Connector: 2 (G1 / 4) thread

Dimensions: 272 * 120 * 24 (MM)

Full set of equipment:

- Radiator X1
- Screws X8
- Nuts x8

Additional Information

Brand	AE
SKU	AE-240RAD-BK-D
Weight	2.0000
Color	Black
Radiator Size	240 (2 x 120mm)
Special Price	\$54.99
