### Product Details:

ROCCAT™ Sota - Granular Blue Gaming Mousepad  
Pointer positioning - at the highest level

Any mouse will glide over the ROCCAT™ Sota Granular Gaming Mousepad with apparent effortless ease and as if fitted with a tracking booster. The granular surface combined with the integrated metal film offers unparalleled gliding characteristics. At the same time, the Sota occupies a smaller footprint on the desktop compared to standard mousepads, without restricting the gliding area in the slightest.

#### GRANULAR SURFACE

The Sota was given a granular surface inspired by the geophysical characteristics of granular matter. This gives the pad unique gliding properties which make it seem as if the mouse is almost moving by itself. Accordingly, pointer positioning is improved and aiming is optimized to such an extent that every gamer will benefit. The wrist cut-out on the lower side of the mousepad and its compact dimensions mean the gliding area is extremely comfortable - perfect for high-sense-gamers in particular.

#### HARD 'N' FLEXIBLE

The Sota mousepad is one of the first mousepads to combine a hard granular plastic surface with an ultra-soft, flexible base. Despite that it achieves a thickness of just 3mm. It lies completely flat on the desktop and thanks to the non-slip base remains rooted to it - it also provides an additional layer of padding for comfort. The surface itself is extremely easy to clean so anything causing friction can be removed in a flash meaning the mouse is never slowed down.

#### INTEGRATED METAL FOIL

Integrated between the hard and soft layers of the mousepad is a thin metal film. On the one hand this gives the mousepad a discreet metallic shimmer which sets this pad apart from the others in terms of looks as well. On the other hand, this film improves the tracking characteristics of the Sota - the metal film reflects the light back to optical or laser sensors without distorting it in any way thereby providing outstanding tracking and amazingly precise aiming.

***When you've got precise pointer positioning behind you, you feel the total independence you have in your actions.***

Eric. J. Dale ROCCAT Scientist

Features:

- GRANULAR COAT  
for increased gliding speed and enhanced mouse movement
- INTEGRATED METAL FOIL  
outstanding tracking characteristics thanks to the integrated metal foil
- HARD N' FLEXIBLE  
combination of hard pad and ultra-soft base - not just for high-sense-gamers
- STRIKING SHAPE  
smart operating range thanks to the wrist cut-out on the lower side
- HIGH QUALITY MATERIALS  
space saving measures 350 x 270mm in size and just 3mm thick
- EASY-TO-CLEAN SURFACE  
allows anything causing friction to be removed in a flash

#### INTEGRATED METAL FOIL

The integrated metal foil reflects light without distorting it. As a result, the mousepad provides outstanding tracking characteristics and extremely precise aiming.

#### HARD' N' FLEXIBLE

The ROCCAT™ Sota combines a hard pad surface with an ultra-soft base, thus combining the best of both worlds and making it the real deal not just for high-sense gamers.

Specifications:

Tested with:

- » ROCCAT™ Kone
- » ROCCAT™ Kova
- » ROCCAT™ Pyra
- » Microsoft® Sidewinder
- » Microsoft® MS 3.0 / 1.1
- » Logitech® MX 510
- » Logitech® MX 518
- » Logitech® G1
- » Logitech® G5
- » Logitech® G7
- » Logitech® G9
- » Saitek™ GM3200
- » SpeedLink® Styx
- » Steel Series™ Ikari
- » Razer Lachesis™
- » Razer Lachesis™
- » Razer Copperhead™
- » Razer Diamondback™
- » Razer Deathadder™
- » Razer Krai™

...and many more.

Reviews:

GeekSmack November 4, 2009

"This mouse is a thing of beauty. Everything seems to make sense and it will impress all of your friends. Paired up with the Sota, this mouse makes one half of the SDMS range and together they are amazing products. In fact this mouse is so good, I urge you to get in touch with your local Roccat dealer and buy this product sometime in November."

Both products receive the Editors choice reward!
