Short Description

For the MICRO system. Polyurethane is a stable synthetic material which has the advantage that when used with the HK no equipment is required as an adjustment for the hose couplings of this series. The tubes are highly resistant against most chemicals (see the relevant information in the article "Plastics and chemicals") and have a high softening temperature, so be largely avoided in case of overheating of the system leaks. Unfortunately PUR hoses are quite stiff but at the same time, so that one has to be expected when laying in the housing with slightly larger radii.

The tubes are highly resistant against most chemicals (see the relevant information in the article "Plastics and chemicals") and have a high softening temperature, so be largely avoided in case of overheating of the system leaks. Unfortunately PUR hoses are quite stiff but at the same time, so that one has to be expected when laying in the housing with slightly larger radii.

Specifications

Material: Polyurethane

Color: black

Dimensions: 6mm OD, 4mm inner (= 1 mm wall thickness)

Temperature: 80 ° C until used

Scope of delivery:

1m PUR hose microSystem 6/4 black (ID 5/32 ")

Additional Information

Brand	Watercool
SKU	WC-50217-D
Weight	0.1000
Color	Black
Tube Type	Polyurethane
Tube Size	4mm x 6mm
Material	Polyurethane
Delivery	Bulk
Special Price	\$1.69
