Product Images

Short Description

The HEATKILLER® MB-X coolers focus on high performance. They are developed for a specific mainboard and dismiss the modular design of the HEATKILLER® SW-X series. Hence, they deliver outstanding cooling performance and very low flow resistance (high flow). Both VRMs and chokes are cooled, resulting in a simultaneous increase in stability and overclocking potential.

Description

The HEATKILLER® MB-X coolers focus on high performance. They are developed for a specific mainboard and dismiss the modular design of the HEATKILLER® SW-X series. Hence, they deliver outstanding cooling performance and very low flow resistance (high flow). Both VRMs and chokes are cooled, resulting in a simultaneous increase in stability and overclocking potential.

Another feature of the HEATKILLER® MB-X series are isolating stand-offs which de-couple cooler and mainboard. At the same time, they enable easy and firm mounting.

Only high quality materials are used manufacturing the HEATKILLER® MB-X series. The bottom is made from pure electrolytic copper while the top is milled from POM to reduce weight. A polished stainless steel cover hides all screws, thus providing a very clean design.

The water coolers can be comfortably integrated into the cooling loop using G ¼ inch threads. Aside from mounting material the coolers comes with pre-cut thermal pads. No further thermal compounds are required.

Specifications

Material: nickel-plated electrolytic copper, POM, stainless steel

Dimensions: (L x W x H): 107 x 19 x 22,5 mm (VRM)

Weight: approx. 430 g

Pressure tested: 5 bar

Sealing: NBR70

Threads: G ¼ inch (DIN ISO 228-1)

Included:

1x HEATKILLER® MB-X VRM ASUS RAMPAGE V EXTREME NI

1x Mounting material

1x Thermal pads

1x Mounting manual

Additional Information

Brand	Watercool
SKU	WC-11557-D
Weight	2.0000
Color	Black
Chipset Motherboard	Asus Rampage V Extreme
Block Style	Nickel-Acetal
Material	Copper
Special Price	\$54.36
