Short Description

From digital cameras to PDAs, memory cards have become an indispensable way to store all our valuable data. While they work fine when used in their respective devices, transferring information from the memory card to your computer usually requires the use of proprietary software and having to go through the device. Since it is common for each device to use a different type of memory card, getting information from all your devices, or trying to exchange data, can be a difficult task.

Description

From digital cameras to PDAs, memory cards have become an indispensable way to store all our valuable data. While they work fine when used in their respective devices, transferring information from the memory card to your computer usually requires the use of proprietary software and having to go through the device. Since it is common for each device to use a different type of memory card, getting information from all your devices, or trying to exchange data, can be a difficult task.

Vantec's 8-in-1 Card Reader/USB Hub helps make the process easier. With the 8-in-1 Card Reader, you are able to read and write to your memory cards with the ease of using a CD or floppy disk. Because each slot is independent, you can also easily transfer files from one memory card to another. The 8-in-1 Card Reader also includes a 3 port USB 2.0 hub, giving you easy access to your USB ports. The Vantec 8-in-1 Card Reader/USB Hub supports Compact Flash I/II (CF), Multimedia Cards (MMC), Secure Digital (SD), Memory Stick (MS), Memory Stick Pro (MS Pro), MicroDrive (MD), and SmartMedia (SM) memory cards and works with USB 2.0 and USB 1.1.
