Description

Removing the power from devices inside your computer can be difficult with standard molex plugs. The protrusions on the side of the molex are difficult to hold on firmly and, if you were to exert force, can leave your fingers feeling sore. The Vantec EZ-Grip Molex connectors simplify the ordeal by putting flexible, rounded grips on the top and bottom of the molex connector. Not only do these grips make it easier to hold, pressing down on the grips separates the connector from the device slightly, perfect for when the molex connector feels "stuck." Vantec EZ-Grip Molex Connectors are available in a variety of UV reactive colors.
