Short Description

The G-VANS GV-CT-02 5 Port Military Switch Baybus uses machined aluminum to organize five, high-performance toggle switches that can handle 30 Watts of power each. Each channel can run at 7V or 12V (or be turned off) by the toggle switches - and the switches use colored LEDs to show what state they are in!

Description

The G-VANS GV-CT-02 5 Port Military Switch Baybus uses machined aluminum to organize five, high-performance toggle switches that can handle 30 Watts of power each. Each channel can run at 7V or 12V (or be turned off) by the toggle switches - and the switches use colored LEDs to show what state they are in! Blue indicates 7V, Red indicates 12V and neither LED is lit when the switch is off. This high-grade control panel is suited for bigger things than just turning fans on and off - at 30 Watts each, one switch could handle an entire liquid cooling system.

Features

- 5 Independent Control Channels
- Illuminated Dual Color LED (Blue / Red)
- Control Over 30W Per Channel
- Easy Access Connectors On Rear Of Panel
- CNC Milled Solid Aluminum Panel
