Description

The MCB120 revision 2 "Radbox" retains [all the functionalities of the original](#) but is now made of injection molded plastic, and receives several cosmetic enhancements:

- a gorgeous silky black paint finish,
- the edge of the housing now overlaps the base plate for a cleaner, more pleasing look,
- and the silver Swiftech logo is applied on the side highly contrasting with the black background for a rich finishing touch

Mechanically, the product is very sturdy thanks to the base plate featuring numerous reinforcement ribs, and it fulfils its function to perfection. The MCB120 Rev2 "Radbox" can support single, dual or triple 120mm radiators.

The new PCI pass-thru bracket is now simplified, eliminating the nipple connections used in the previous kit. The tube passes straight thru the bracket which improves flow rate, eliminates four connections, and therefore the possibilities for leaks.

Specifications
