Description

The TWISTER 120 incorporates our newest ISO-Turbo Technology for increased cooling. The dual 120mm MFDB fan spins in opposite direction which allows for more concentrated airflow, combined with the three 8mm heat pipes and large fin area, the TWISTER 120 offers one of the best cooling capabilities in its class.

To ensure that the maximum cooling performance is obtained, we have also included our highest performing thermal compound, the TX-4. Furthermore, We also provide The Rheosmart Fan Controller. This "Smart Cooling System" operates in two different modes; when connected to a PWM-enabled motherboard, you can allow the system to auto-adjust fan speed through the motherboard's temperature sensor. When switched into manual mode by pressing the small button below each knob, you turn that specific channel into manual control mode.
