## Description

---

The transparent and extremely flexible FlexLight MULTI Bluetooth is a mobile phone APP controlling light product. It has 60 luminous diodes and is water and shock resistant. It is connected via a 4-pin Molex connector, which makes it applicable to virtually any PC system.

The light band contains small magnets and can therefore be quickly and easily fixed in or on the housing and then connect only with the power supply. Due to the flexible protective layer, which is placed around all diodes and cables, FlexLight you can even put in a surge tank - awesome!

This version of FlexLights enables flexible RGB lighting of the housing, according to the preference the belt in 125 different colors can shine and in addition to the simple lighting and a lighting effect such as Fade, Strobe, Smooth and Flash.
