Short Description

Prewired LED's are easy to use and convenient for many case mods. These are premium bright LED's that have a long life span.

Description

Prewired LED's are easy to use and convenient for many case mods. These are premium bright LED's that have a long life span.

Installation: This LED is designed for computer cases. You can connect it to the Power LED or HD LED connectors on your motherboard. The LED connectors on motherboards are sometimes three-pin and sometimes two-pin. This device comes with two

pins that are split across the 3-pin connecotor but, can be easily moved, making it possible to work with both 3-pin and 2-pin connectors on motherboards.

Warning: The white wire is for Ground and the blue is for positive. It will not work if the polarity is reversed.

You have to install the LED to the front bezel of your case yourself. You may have to remove the existing LEDs on the bezel to install this replacement. You may have to glue the LED to the front bezel.

LED wires can be fully sleeved in Premium Sleeving and heatshrink, colors of your choice.

Features

- 3.3V.
- 15" or 38cm long.
- 3mm diameter.
- Very bright, diffused color.
- Six colors and two sizes to choose from: Blue, Red, Green, Purple(UV), White, and Yellow/Amber.
- Great to replace the existing (boring) green or amber LEDs in computer cases for power and/or hard drive.
- Pre-wired with connectors. Ready to be plugged to your motherboard and play!
