Short Description

Here is a tool that is a must for paracord sleeving. This tool will save you hours of work and save your paracord from having little rips and tugs in it. Its also very easy to use and is a MAINFrame Customs exclusive Tool.

Description

Here is a tool that is a must for paracord sleeving. This tool will save you hours of work and save your paracord from having little rips and tugs in it. Its also very easy to use and is a MAINFrame Customs exclusive Tool.

Lets show you how it works:

- First you find the Female ATX side of the crimped wire – the inside of the Paracord Threader is milled just for this side.
- Next you insert the sleeved wire as far as it will go – it should feel secure inside of the tool.
- Then you take your paracord that you have slightly singed with your lighter to make it stay into place and pull it over the tool and the wire.
- Then you pull the tool and wire all the way to the other side of the paracord and then once outside of the paracord you can remove the tool and feel free to continue sleeving.
Its a simple tool that saves you a ton of time. We personally wont sleeve paracord without it.

Originally Lutro0-Customs Paracord Threader
