PC Coolant Base. Drop your temperatures to the lowest.

## Description

Our fifth production of our Limited Edition DazMode PROTECTOR Revision V (2020 / Red Cap) is a special treat

for DazMode community members!

PC Coolant Base. Drop your temperatures to the lowest.

Dazmode Protector is an anti-corrosion/ additive fluid and heat carrier for performance PC Cooling systems. It protects components of your liquid cooling loop from metal oxidation. It effectively drops the temperature of critical heat sources in your PC, such as the CPU and GPU.

Use with distilled water only, for maximum performance, mix 100ml of DazMode protector with 400ml bi-distilled water (1:4 ratio); up to 900ml of bi-distilled water is acceptable (1:9 ratio) to maintain anti-corrosion.

For the best result, we recommend [DazMode Ultra Pure Distilled water](#).

It contains ethylene glycol <70%. Harmful if taken internally. Keep out of the reach of children and pets. Avoid contact with

eyes and skin. If contact does occur, clean skin with lots of water and soap. Rinse eyes with lots of water.

Formulated and Made in Germany under DazMode's request.
