## Features

---

If there aren't enough DRGB headers on the motherboard, you can use the "Bitspower Touchaqua Digital RGB Multi Function Controller", which is available for purchase in the options below.

I wanna show off, but what's the support I'd need?

#### ◆DRGB

The end of power supply is 3PIN. The sequence is +/D/↓ (some motherboards are shown +5V/D/↓, and the plug is like 4PIN but the 3rd PIN is empty). Please plug in the corresponding direction of motherboard, controller or the wire integrator for one to many. If choosing the motherboard as the power supply, the light effect can be synchronize with MB. Digital Controller can be purchased in options below.
