Short Description

Flexible Nylon Spiral Wrap is a Strong Harness for cables, cords, and wires. For use to bundle small cables around your case and give a consistent color look!

UV Black Spiral Wrap is a flexible harness used to better manage cables, wires, and cords when forming bundled installations. The open sheath sides allow wires to break through for better install options, such as routing in different directions. The strong nylon or polyethylene materials don't easily break, and protects from abrasion, vibration, and even temperature differences. The spiral wrap harness is a great way to improve the appearance, provide support, and vary installations in many types of environments and applications.
