

Remote/Secondary Power Supply Starter Cable for Modular PSU's - Sleeved

\$12.95

Product Images

Short Description

This device is a simple Power supply starter. It consists of a 20 or 24-pin female connector that inserts into a modular type Power Supply to turn them ON/OFF. Cable comes with the remote rocker switch which can be mounted conveniently anywhere on the outside of your case. This starter is meant to be inserted into the modular PSU when you do not want to use your motherboard cable. If you have a non-modular power supply please order our remote starter for standard PSU's.

Description

This device is a simple Power supply starter. It consists of a 20 or 24-pin female connector that inserts into a modular type Power Supply to turn them ON/OFF. Cable comes with the remote rocker switch which can be mounted conveniently anywhere on the outside of your case. This starter is meant to be inserted into the modular PSU when you do not want to use your motherboard cable. If you have a non-modular power supply please order our remote starter for standard PSU's.

This 24" long cable can also be use for those of you with such overloaded systems that you require a secondary power supply to be mounted in your case and be easily turned on/off. Use your main PSU for the mainboard, I/O devices, and video card and take the strain off that main PSU by using this device with a secondary mounted PSU mounted in the case to handle all the extras, like fans, cathode lights, and other devices not essential to booting and running your system.

This is also very handy for use on a test bench where you need a quick way to fire up a PSU and test devices such as fans, lights, etc.

Once again Performance PCs continues to innovate for you the hard core modder!

Specifications

- 20 or 24-pin black female connector works with either 20 or 24-pin modular power supplies
- Cable length: 24"
