Short Description

The Liquid MetalPad is the innovation in the cooling of processors from High-End PC systems with a heat conduction pad! The Coollaboratory Liquid MetalPad is the first heat conduction pad, which is composed of 100% metal and melts with just less heating (BurnIn-process), then it confects its superior heat transfer. It dissipates the heat fast and efficiently and need not hide from the best heat conduction paste. The simple, clean and fast installation turns the Liquid MetalPad into the ultimate heat conduction medium for HighEnd PCs.

Description

The Liquid MetalPad is the innovation in the cooling of processors from High-End PC systems with a heat conduction pad!

The Coollaboratory Liquid MetalPad is the first heat conduction pad, which is composed of 100% metal and melts with just less heating (BurnIn-process), then it confects its superior heat transfer. It dissipates the heat fast and efficiently and need not hide from the best heat conduction paste. The simple, clean and fast installation turns the Liquid MetalPad into the ultimate heat conduction medium for HighEnd PCs.

The Liquid MetalPad can be used with all on the cooling market commercially available materials, for instance aluminum or copper! It doesn't age and doesn't have to exchange regular. The Coollaboratory Liquid MetalPad is certainly RoHS conformable and absolute nontoxic.

The Coollaboratory Liquid MetalPad 3xCPU and 2xGPU is delivered in a transparent blister-package, a detailed printed manual and contains three Liquid MetalPads for CPU's (ca. 38x38mm) and GPU's (ca. 20x20mm). Additionally there is a cleaning set with cleaning tissues and a metal grinding pad for removal or cleaning of the contact area before and after using the Liquid MetalPad included.

Note: This Item can not be shipped using DHL

Additional Information

Brand	Coollaboratory
SKU	CL-LIQUID-MP-3XCPU-2XGPU
Weight	0.4000
TIM Type	Pad
Special Price	\$11.21
