\$18.99

Product Images

Short Description

The Cape Corp AGB2 reservoir serves to fill and aspirate a water cooling system. It can be placed inside or outside the case and provides the pump with water that is free of bubbles.

Description

The Cape Corp AGB2 reservoir serves to fill and aspirate a water cooling system. It can be placed inside or outside the case and provides the pump with water that is free of bubbles. Once mounted simply fill through the filling hole at the top of the AGB2 (oil inspection glass cover) The the G 1/4" screw threading accommodates different connections and thus it can be combined with different hose diameters.

Features

Features:

- Easily mounted: can be placed internally or externally.
- Accessible filling hole.
- Inspection glass cover for optical monitoring.
- Provides bubble free flow to the pump.
- High quality, unique, creative design.
- 1/4" threads accommodates a variety of connections and hose diameters.
