Product Images

Short Description

Enhance your online meetings with the Creative Live! Cam Sync 1080p, which delivers full HD videos at 30 FPS, so you can present yourself professionally with realistic clarity in any environment.

Description

Enhance your online meetings with the Creative Live! Cam Sync 1080p, which delivers full HD videos at 30 FPS, so you can present yourself professionally with realistic clarity in any environment. UVC compliant and compatible with most popular video conferencing applications, the Live! Cam Sync 1080p is easy to use and quick to set up, so you can be ever ready for your online meetings and video calls.

Features

- Can't meet in person? Fret not, you can create a similar experience with Creative Live! Cam Sync 1080p! Meet online with sharp and fluid full HD video, where your face is captured clearly and naturally so you can lead the call with complete confidence. Whether it's an important conference call or a casual chat with your buddies, the Live! Cam Sync 1080p displays only the best of you.
- You don't have to sit further away from your screen for the camera to capture more of you. Creative Live! Cam Sync 1080p comes with a wide viewing angle that allows more to be captured without any optical distortion. With 77° diagonal field of view, it's wide enough for you to comfortably fit a small group of people into the frame for a mass conference call, but not too wide that you look small or risk showing too much.
- The Live! Cam Sync 1080p is UVC compliant, this means that the webcam requires no additional driver installation and will work immediately when you plug it into an available USB-A port on your computer. It is also compatible with most popular video conferencing applications, so you can set up your webcam quickly and be ready even for the most last-minute meetings.
