Description

Product Details:

Panaflo 4 Pin Tail with separate RPM connection. Tail any Panaflo with a Molex connector in Seconds! Now you can plug your Panaflo to your PSU and still get RPM sensing via the 3-pin connector.

For years overclockers have lamented that the Panaflo - one of the best fans on the market - comes with bare leads. Now you can have professionally tailed Panaflo fans without tools, soldering, or wiring.

These tails are installed by removing the bar leads from your fan by merely pulling off the plug that they are attached to. Then, you take our Panaflo Tail and insert the Panaflo OEM plug into the socket. Its as easy as that.

NOTE: RPM monitoring fans have a special rotor sensor. This cable can only transmit the RPM signal if you have a Panaflo fan that has RPM Sensing (usually designated with -BX in model).

Fan cable is fully sleeved in nylon Techflex sleeving and Premium heatshrink, colors of your choice.

Specifications

Specifications:

- Approximately 12 inches in length
- Panaflo OEM plug to 4 pin Molex and 3-pin Female Fan Connector
- Machine Made
- Warrantied against defects.
