

Aquacomputer SPLITTY9 ACTIVE - active splitter for up to 9 PWM fans

\$14.99

Product Images

Short Description

The SPLITTY9 ACTIVE from Aqua Computer offers space for up to 9 PWM fans. In contrast to passive splitters, the SPLITTY9 has three special features: voltage input, PWM signal amplification and an adjustable turn-on threshold. With the voltage input, the splitter is supplied with power via a SATA connector. Thus the fans are not dependent on the connected fan output, but can all be supplied with the maximum power of the SATA connector.

Description

The SPLITTY9 ACTIVE from Aqua Computer offers space for up to 9 PWM fans. In contrast to passive splitters, the SPLITTY9 has three special features: voltage input, PWM signal amplification and an adjustable turn-on threshold. With the voltage input, the splitter is supplied with power via a SATA connector. Thus the fans are not dependent on the connected fan output, but can all be supplied with the maximum power of the SATA connector. The amplification of the PWM signal prevents the PWM fans from interfering with the PWM signal of the fan output, which could otherwise no longer be controlled. The adjustable switching threshold allows PWM fans to be switched off, which are usually unable to do so. For this purpose, the rotary knob on the splitter is set accordingly. If the incoming PWM signal is below the threshold, the power supply of the fans is switched off.

Specifications

Technical Data:

- Maximum power: 4.5 A
- Dimensions: approx. 57 x 39 x 16 mm
- Scope of supply: 1x splitter, 1x 4-pin connection cable, total length 70 cm, self-adhesive velcro tape, fixing material

Additional Information

Brand	Aquacomputer
SKU	AQ-53283
Weight	2.0000
Color	Black
Fan Accessory Type	PWM Fan Hub
Vendor SKU/EAN	4260473312390
