Please read below for more information before ordering.

Description

These Custom UV Printed DRGB Backplates are a great way to personalize your GPU with your favorite artwork, logo's or just some crazy patterns. They are made out of 2 pieces of acrylic and include a D-RGB LED Strip to really help your rig stand out from the rest!

Please

note: We do not recommend using these without a stock backplate or after market backplate such as one from EKWB.

Images should be High-Res preferably 300dpi for best print quality and should be at least a 1/8" bigger then the print area. Going below these specification will cause print to be blurry

Acceptable file types: .png, .jpg, .jpeg, .bmp, .ai, .eps, .psd(Any artwork not in proper format maybe subjected to an additional charge)

For any questions on Artwork, installation, or for additional Blackplate choices please email:Garrett@performance-pcs.com
