## Description

---

A valuable addition to any Modder's Dremel rotary tool, the Dremel 692 6-Piece Router Bit Set includes six high-speed router bits made from high-grade steel. Conveniently packaged in a reusable plastic case, these bits are ideal for routing, inlaying, and mortising wood and other soft materials. Ideal for a wide range of light to medium hobby, repair, and renovation jobs, this set ensures that you have the exact bit you need to tackle your next project.

## Features

---

### High-Speed, Durable Steel Construction to Tackle a Range of Jobs

Made of high-speed, durable steel, these bits are the ideal size for rotary tools. The straight bits offer exceptional versatility, and the piloted edge bits help you add a personalized, detailed touch to wood frames, molding, and more.

### Quality Construction for Precise Cuts the First Time

Designed for use with the 335 Plunge Router and 231 Shaper/Router attachments, these bits feature high-quality construction that allows you to make exceptionally precise cuts the first time, saving you energy and stress. They're also well-suited for detailed work, such as building and sanding dollhouse furniture, model trains, or miniature buildings and planes.

### User-Friendly Design and Easy Insertion Process for Longer Life

Incredibly easy to use, these bits work best when inserted all the way into the tool and then backed out slightly before tightening down. This insertion process provides plenty of shank for the collet or chuck to hold the bit in place. For optimum precision and longer life, it's also important to secure objects to a stable surface while working--if chattering occurs, simply increase the speed. It is also important to keep a light touch so the speed of the tool, not the strength of your arm, does the work.

### Variety of Bits for a Range of Projects

This set comes with a total of six bits, including a 3/32-inch piloted beading bit, 1/4-inch core box bit, and 1/2-inch chamfer bit that all work well for inlaying and mortising wood and other soft materials.
