LIGHT UP YOUR COLORS

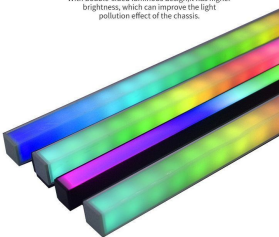

ALUMINUM SHELL HEAT DISSIPATION

When the LED lamp bead is on for a long time, if the accumulated heat can not be dissipated, it will lead to light failure, shorten the service life, and the heat dissipation effect of the hard side with aluminum heat dissipation is improved. The surface is treated by sandblasting process, which has delicate texture and cool touch.

HIGH BRIGHTNESS ENHANCED  
LIGHT POLLUTION LIGHT BAR

With double-sided luminous design, it has higher brightness, which can improve the light pollution effect of the chassis.
