Short Description

EK-Quantum Scalar² SFF Terminal – Acetal is a specialized Scalar² terminal for EK-Quantum Vector² GPU water blocks from the premium Quantum Line.

Description

Details

EK-Quantum Scalar² SFF Terminal – Acetal is a specialized Scalar² terminal for EK-Quantum Vector² GPU water blocks from the premium Quantum Line. It was engineered with the benefits of SFF-builders in mind. It is 14mm thinner than the stock terminal that comes with the water block and offers a plethora of new connectivity options. This thinner terminal can help if your GPU is too wide to close the case panel with the stock terminal.

Features

A total of six G1/4" ports allow for a plethora of options when routing to and from the GPU. It has two ports on the section that goes over the water block itself, which is especially useful for sandwich layouts very commonly found in SFF cases. Additionally, two new ports are located on either side of the terminal, going alongside the GPU's length and allowing tubing to run parallel to the GPU itself.

Two ports are located on the top of the terminal, which is standard also with the stock terminals but does allow extra options which is always a plus in space-constrained mini-ITX cases.

This terminal is CNC-machined out of durable black POM acetal. Two plug covers come with this product.

Specifications

Additional Info

	Black
	G1/4

Additional Information

Brand	EK Waterblocks
SKU	EK-QTM-SCALAR2-SFF-TERM-AC
Weight	1.0000
Color	Black
Vga	AMD FirePro W9100
Block GPU Type	Nvidia/AMD
Block Accessory Type	Replacement Part
Material	Plexiglass
Vendor SKU/EAN	3831109900444
